### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.**

**DETAILED ACTION**

1. This is in response to the communications filed on 7 August 2008.
2. Claims 1 and 4-11 are pending in the application.
3. Claims 1 and 4-11 have been allowed.
4. Claims 2, 3 and 12-20 have been cancelled.

***Allowable Subject Matter***

5. Claims 1 and 4-11 are allowed.

The following is an examiner's statement of reasons for allowance:

The current application is directed towards an integrated security system operating over a network includes a network security controller coupled to the network having a relational database including portal objects and related resources represented in at least one table in the relational database. The system further includes at least one network node having a local database coupled to the network adapted to receive predetermined resource information from the relational database, an event generator coupled to the local database to provide at least one portal event in response to the predetermined resource information received by the local database, and a finite state portal controller coupled to the network and the event generator for providing at least one of an action and a global event in response to the at least one portal event.

The closest prior art to the current application is Brooks et al US 2003/0210139 A1 (hereinafter Brooks). Brooks is directed towards a comprehensive method and system for providing improved security at an existing facility or providing improved security in the design of a facility to be built. The system and method can be used to evaluate an existing facility in order to determines an overall rating for a particular facility and which can also be used identify

Art Unit: 2131

individual or elemental weakness of the facility. The method and system can analyze the data gathered during the evaluation in order to determine remedial measures that can be used to improve the facility's overall rating and strengthen the identified individual or elemental weaknesses. A comprehensive system that monitors the flow of people, vehicles, luggage, packages and airplanes in order to provide improved security is also disclosed.

However, there are differences between the Brooks reference and the current application. Brooks contains no reference to protocols. A single reference in Brooks paragraph [0032] describes normalizing security ratings. In contrast, the current application's protocol normalizer and data stream converter convert and process data from legacy devices to generate high level events and control signals which can be processed by a network based security system. Additionally, in the current application the protocol normalizer "processes the converted data stream using a mapping function in conjunction with the local database 176. The mapping function detects and processes state changes. The state changes are transformed into portal events which are subsequently processed by the finite state portal controller 162." (Specification page 17 line 28 - page 18 line 2). The specification, for the current application describes in some detail the function of the protocol normalizer: "Protocol normalization is a process by which legacy field devices 116 are made accessible to the integrated security system 100 for one or more of the integrated security applications (e.g. access control). The protocol normalization process maps input data streams and between the protocol adaptor 114 and the legacy field devices 116 into portal events and signals to control legacy field devices 116. The protocol normalization process also maps commands from the network security controller 110 into signals to control legacy field devices 116 resources at a portal." (Page 18 lines 17-23) and "In one

Art Unit: 2131

embodiment, the signal interface 168 is an RS-485 interface. It will be appreciated by those of ordinary skill in the art that an alternative serial interface, for example, RS-232, RS-422 or network interface can be substituted for the RS-485 interface. The RS-485 interface is coupled to the legacy field device 116. The operation of the protocol adaptor 114 is described further in conjunction with FIG. 6. The signal interface 168, in one embodiment, is an asynchronous receiver transmitter (UART) using an RS-485 multi-drop protocol, communicates with a plurality of legacy field devices 116, each legacy field device 116a-116j having a unique address. The data stream converter 166 processes an access control event 175 from the legacy field devices 116, calculates and checks the CRC for some legacy field devices 116. Some legacy field devices 116 require a polling sequence which is generated by the data stream converter 166. A local action is processed by the data stream converter 166 resulting in a local action field device signal 177 being transmitted to the legacy field device 116." (Page 17 line 14-26) Therefore, as described by the current application, the Brooks reference nor the prior art teaches the protocol normalizer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
